# MOHAMMED ABDUL AWAIZ

# INTRODUCTION

I am a tactician, a strategist, currently skilled in MERN stack development, who's exploring the startup ecosystem by helping founders in terms of tech to become part of their stories! Looking out for any opportunities to learn and grow with people driven by passion:)

# **EXPERIENCE**

### SU KNOWLEDGE HUB FOUNDATION

Incubation Center Assistant: Nov 2023 – Aug 2024
Both technical and non-technical domains were my responsibility. Assisted the CEO with incubator's website development, deployment & maintenance, SMM, documnetation, designing and so on.

Brought in 5+ startup incubation applications.

# **BIOREFORM**

Freelance Developer: June 2023

Developed the first version of <u>greenybags.com</u> that facilitates sales of hundreds of eco-friendly polymer bags replacing vast amounts of plastic from festivals.

### **EDVENTURE PARK**

Campus Lead: Aug 2022 – March 2024 Learned what it takes to become a student entrepreneur by experiencing development, sales, marketing, operations & design. Explored the startup ecosystem. Learning and collaborating with startups always!

### **ACM MICET**

<u>Web Master</u>: Jan 2021 – June 2022 My first team! They basically taught me everything about teamwork & how a group of people can make a difference

# **EDUCATION**

MUFFAKHAM JAH COLLEGE OF ENGINEERING & TECHNOLOGY
B.E (IT) 2024 Graduate
CGPA 8.03

# OTHER INTERESTS

Designing Marketing MERN Developer

# **PROJECTS**

# INFO CLUSTER | repo

My most recent & portfolio project with production level practices. It's a **reactjs**-based frontend app, a full-fledged blogging platform that uses **appwrite** for backend & database, **react-hook-forms** for complex form functionality and **redux** for state management.

### DENAURLEN | repo

An auth-app that was an assignment given by a startup for which I learned and implemented redux, react-hook-forms and zod upon reactjs, nodejs coupled with express and mongoose for backend, mongodb for database and jwt for tokens. This was the given design.

### <u>LEGIONCODE</u> | repo

A real-time chat space with minimal and interactive UX, built with **reactjs**, **socket.io** and **nodejs**. User can quickly create single & group chats to communicate with anybody on the internet without any auth hassle.

#### OCTO | repo

A UX focused to-do list with a twist! Built using **reactjs** with its **context API** and **localStorage API**, the app helps organise editable todos with multiple lists.

### MEME GENERATOR | repo

Drag & drop for fun! Creates the famous ranking meme using drag & drop API and DOM upon vanilla js, letting users drag & drop images in their own custom hierarchy.

### CURRENCY CONVERTOR | repo

A simple app to demonstrate **API handling**. Uses **fetch API** with **vanilla is** to display the **JSON** data recieved.

# **SKILLS**

Familiar with

- Javascript, Typescript, Python
- Docker, Git, Github
- Node JS, Express JS
- MongoDB, MySQL, SQLite
- React JS, Redux
- Material UI, Bootstrap, Tailwind
